PRIVACY POLICY of MediCappbinet!

Last updated: 2 November 2026

1. Who handles the data

The app is developed by AVLAM App. Contact: sviluppo.app.am@gmail.com.

2. What data you enter

Names of people, medicines, packages and expiry dates, prescriptions and therapies, doses taken, doctors, visits, exams and vaccines. This is health-related data and you enter it yourself.

3. Where the data stays

Only on your phone. The app has no Internet permission (the package leaflet opens in your phone's browser, outside the app), sends no data to servers, and contains no ads, analytics or tracking. It creates no accounts.

4. Sharing

The app sends nothing by itself. If you use "Send to the manager", your phone shares the message with the app you choose. There is also an optional, hidden folder-sync feature: the files stay in the folder you choose and in your own storage.

5. Backups

You create backups yourself and save them wherever you like. You can protect them with a password; without one, anyone who finds the file can read it. If you forget the password the backup cannot be recovered.

6. Permissions

Camera (only to read the barcode on the box: no image is saved or sent), notifications (for reminders), exact alarms (so doses ring at the right time) and boot completed (to reschedule reminders after a restart).

7. People you manage

If you enter data about other people (for example children or relatives), you must have their consent or the responsibility to do so.

8. Deletion

Delete the data in the app or uninstall it: data on the phone is removed. Backups you saved stay where you put them.

9. Changes

This text may change with app updates; the date above shows the latest version.
